

THE TRIFECTA

OF MOBILE PRINTING

#1

EFFORTLESS

The software that supports your mobile printing functionality should be easy to use. If you get annoyed or frustrated trying to print remotely, then look for alternatives.

#2

WIRELESS

Not to overstate the obvious, but you should not need any printer cables to print remotely. If you are plugging your device into a printer then you will print more securely, but it can be often a challenge to carry a printer and cable around with you!

#3

SECURE

Mobile printing is most secure when your data passes through a single server to the printer. Many third-party mobile printing apps pass your data through several servers to the printer which opens your information up to 'trawling' security risks.

BACKING THE WINNER

Your best bet is to use a mobile printing software solution that aligns with your brand of printer. That way, software installation & use will be seamless, device to printer compatibility is a certainty and data security from start to finish will give you much more peace of mind.
